

Your friend is typing his ***name*** into a keyboard. Sometimes, when typing a character ***c***, the key might get long pressed, and the character will be typed 1 or more times.

You examine the typed characters of the keyboard. Return «True» if it is possible that it was your friends name, with some characters (possibly none) being long pressed.

Sample input 1:

name = «alex», typed = «aaleex»

Sample output 1:

true

Sample input 2:

name = «saeed», typed = «ssaaedd»

Sample output 2:

false

Sample input 3:

name = «leelee», typed = «lleelee»

Sample output 3:

true
