Your program is given an integer N ($1 \le N \le 100000$). Next are the N integers in ascending order. Then given an integer M ($1 \le M \le 300000$), followed by M queries. Each request is an integer. For each X request, print on a separate line the number of elements in the input array that are strictly greater than X.

Sample input 1: 5 1 3 4 6 8 3 3 0 9 Sample output 1: 3 5 0 Sample input 2: 5 1 3 3 3 3 5 1 3 Sample output 2:
